

## Scientific background

Extensive pre-clinical tests on **Collagen-Pro™** enriched **EncoSkin** have shown enhanced cellular bio activity as measured by significant increase in alkaline phosphatase enzyme levels of treated skin when compared to the control skin.

EnColl's **Collagen-Pro™** triggers the Cell Signal Transduction process, stimulating rapid regeneration of skin tissues. This natural collagen fills and firms up your skin while restoring tone, elasticity and accelerating rapid skin regeneration.

**Collagen-Pro™** is the purest pharmacological grade type-I collagen available in the market. **Collagen-Pro™** is manufactured through a patented two step purification process. **Collagen-Pro™** has been tested by dermatologists and scientific researchers and has been proven very effective in promoting skin repair and revitalization.

**EncoSkin** contains no drugs and is hypoallergenic. In 5000+ clinical trials there were no recorded adverse reactions, allergic, or rejection responses. **EncoSkin** is an all natural treatment for skin rejuvenation.

**EncoSkin** is quite effective in the control of any oxidative damage to the tissues, through the presence of alpha hydroxy acid in the formulation.

# Before

# After

Reduces up to  
**54%** of  
facial lines  
and wrinkles

**Contents:** Nanotech Collagen in skin tested purified water base containing alpha hydroxy acid.

**Storage:** Ambient temperature  
(4 to 40C or 30 to 104F)

**Caution:** For external use only. Avoid contact with eyes. Keep out of reach of infants.

Nanotech Collagen

## Fulfills the Dream of Beautiful & Healthy Skin

## Safe and Effective

**E**ncoll's research has achieved a technological breakthrough with the discovery of modified type-I collagen, Collagen-Pro™. This modified structural protein is crucial to tissue growth and remodeling through the cell signal process. EncoSkin, a serum made of Collagen-Pro™, is the next generation in advanced skin care. Unlike other products, it promotes skin regeneration at a cellular level by working from the inside out. Among all available compounds, Collagen-Pro™ is the most effective, safe, non-irritating and non-sensitizing. When applied topically, it has a soothing, healing effect on dry or inflamed skin.

### Usage Directions

Use EncoSkin twice daily on clean skin in place of your daily moisturizer or as recommended by your dermatologist. Results will be apparent within two weeks and skin will continue to improve with ongoing usage.

### Clinical Results

Clinical studies measured the effectiveness by changes in the following symptoms of abnormal or disease-prone skin.

- Reduces Redness in 71% of Participants.
- Smooths Scaly Rough Skin in 88% of Tested Cases.
- 69% of Participants Demonstrated Improvement in Skin Tone.
- 92% relief from Itching, Stinging and Burning Sensation following Laser Treatment.
- Significant increase of Skin Moisture Level when monitored by Skin Conductance Measurements.

### Advantages

Collagen-Pro™, an active part of EncoSkin, acts as a moisturizer and an anti-inflammatory, natural healing agent. It stimulates damaged skin cells to revive and activate the cell-signal transduction process. This process stops the production of matrix-destroying enzymes and promotes the conversion of undifferentiated cells to rebuild the damaged tissue.

## Why Enco Skin...

Most skin care products are formulated with hydrolyzed collagen or gelatin. These formulations are manufactured with proteins that are fractured in an attempt to make them small enough to penetrate the

skin. This fragmenting process reduces or eliminates the natural bio-activity of collagen.

EncoSkin's active ingredient, Collagen-Pro™ is a non-fractured native structural protein which retain its full bio-activity. This protein is highly effective in activating the damaged skin cells to accelerate the tissue regeneration process.

EncoSkin lotions are clinically proven to start working within 2 to 8 hours.
